SOFT ROUGH LATTICE

SANKAR KUMAR ROY\textsuperscript{1} AND SUSANTA BERA\textsuperscript{2}

Abstract. Rough and soft sets are both mathematical tools for dealing with uncertainty. But soft set theory is utilized for the first time, to generalize Pawlak's rough set model. Soft rough set is a connection between these two mathematical approaches to vagueness. In this study, we find a algebraic connection between soft rough set and algebraic system and thereby introduce the notion of soft rough lattice in a soft approximation space. We define the concept of a soft rough lattice, soft rough sublattice, modular soft rough lattice and distributive soft rough lattice. Finally, we cite some examples to illustrate the definitions.

1. Introduction

In 1999, Molodtsov [1] introduced soft set as a mathematical tool for dealing with uncertainty. Thereafter a rapid growth of applications [1, 2] of soft set has been found in many fields of mathematics. Maji et al. [3] discussed the application of soft set theory in a decision making problem. Yang et al. [4] introduced interval-valued fuzzy soft sets. Maji et al. [5] defined the operations of soft set and a theoretical study on soft set. Aktas and Cagman [6] found a algebraic connection between soft set and algebraic system and introduced soft groups. The lattice structure of soft set has been found in [7, 8].

Rough set theory was introduced by Pawlak [9] is another mathematical approach to vagueness. This theory deals with two key notions: rough set approximations and information systems. Rough set approximations are defined by means of an equivalence relation namely indiscernibility relation. Every rough sets are associated with two crisp sets, called lower and upper approximations and viewed as the sets of elements which certainly and possibly belong to the set. It has been successfully applied to knowledge discovery, decision analysis, signal processing, mereology and

The rough set theory is often a useful and powerful approach to dealing with uncertainty but have some inherent difficulties mentioned by Molodtsov [1]. Soft set theory is a possible way to solve the difficulties of rough set. Thereafter a possible fusion of rough set and soft set has been proposed by Feng et al. [12] for the first time and introduced the concept of soft rough set. In this theory generalized rough set has been studied based on soft set.

In this study, we find a algebraic connection between soft rough set and algebraic system and thereby introduced the notion of soft rough lattice in a soft approximation space. To proceed this work we introduced some operation on soft rough set like soft rough union soft rough intersection, soft rough inclusion in section 2. We also present soft rough sublattice, soft rough modular lattice and soft rough distributive lattice and discussed their related properties.

2. SOFT SET AND SOFT ROUGH SET: AN OVERVIEW

Here we recall some basic properties and definitions related to soft set and soft rough set.

Let $U$ be an initial universe of objects and $E$ be the set of parameters and $A \subseteq E$. $P(U)$ is the power set of $U$.

**Definition 2.1.** [1] A pair $S = (F, A)$ is called a soft set over $U$, where $F : A \rightarrow P(U)$ is a set valued mapping.

**Definition 2.2.** [12] Let $S = (F, A)$ be a soft set over $U$. Then the pair $P = (U, S)$ is called a soft approximation space. Let $X \subseteq U$. We defined the following operations on $P$

$$\text{apr}(X) = \bigcup_{a \in A} \{F(a) : F(a) \subseteq X\},$$

$$\text{appr}(X) = \bigcup_{a \in A} \{F(a) : F(a) \cap X \neq \phi\},$$

which are called soft lower and upper approximations respectively of $X$ and the pair $(\text{apr}(X), \text{appr}(X))$ is called soft rough set of $X$ with respect to $P$ and is denoted by $S_r(X)$. If $\text{apr}(X) = \text{appr}(X)$, $X$ is said to be soft definable; otherwise $X$ is called soft rough set. The set of all soft rough sets over $U$ is denoted by $S_R(U)$ with respect to some soft approximation space $P$.

Suppose $S = (F, A)$ is a soft set over $U$ and $P = (U, S)$ is the corresponding soft approximation space. Then soft approximations satisfy the following properties:

(i) $\text{apr}(\phi) = \text{appr}(\phi) = \phi$,
(ii) $\text{apr}(U) = \text{appr}(U) = \bigcup_{a \in A} \{F(a)\},$
(iii) \( \text{apr}(X \cap Y) \subseteq \text{apr}(X) \cap \text{apr}(Y) \),
(iv) \( \text{apr}(X \cup Y) \supseteq \text{apr}(X) \cup \text{apr}(Y) \),
(v) \( \text{apr}(X \cup Y) = \text{apr}(X) \cup \text{apr}(Y) \),
(vi) \( \text{apr}(X \cap Y) \subseteq \text{apr}(X) \cap \text{apr}(Y) \),
(vii) \( X \subseteq Y \Rightarrow \text{apr}(X) \subseteq \text{apr}(Y) \) and \( \text{apr}(X) \subseteq \text{apr}(Y) \).

**Definition 2.3.** Let \( S_r(X) = (\text{apr}(X), \text{apr}(X)) \) and \( S_r(Y) = (\text{apr}(Y), \text{apr}(Y)) \) be two soft rough set. Then soft rough union and soft rough intersection of \( S_r(X) \) and \( S_r(Y) \) are defined by \( S_r(X) \sqcup S_r(Y) = (\text{apr}(X) \cup \text{apr}(Y), \text{apr}(X) \cup \text{apr}(Y)) \) and \( S_r(X) \sqcap S_r(Y) = (\text{apr}(X) \cap \text{apr}(Y), \text{apr}(X) \cap \text{apr}(Y)) \) respectively, where the symbols \( \sqcup \) and \( \sqcap \) stand for soft rough union and intersection respectively.

**Definition 2.4.** Let \( S_r(X) = (\text{apr}(X), \text{apr}(X)) \) and \( S_r(Y) = (\text{apr}(Y), \text{apr}(Y)) \) be two soft rough set. Then \( S_r(Y) \) is said to be soft rough subset of \( S_r(X) \), denoted by \( S_r(Y) \subseteq S_r(X) \) if \( \text{apr}(Y) \subseteq \text{apr}(X) \) and \( \text{apr}(Y) \subseteq \text{apr}(X) \), where \( \subseteq \) stands for soft rough inclusion relation.

### 3. Soft Rough Lattice

Let \( S = (F, A) \) be a soft set over \( U \) and \( P = (U, S) \) be a soft approximation space and \( S_R(U) \) be the set of all soft rough sets with respect to \( P \).

**Definition 3.1.** Let \( L \subseteq S_R(U) \), and \( \lor \) and \( \land \) be two binary operations on \( L \). The algebraic structure \((L, \lor, \land)\) is said to be soft rough lattice if

(i) \( \lor \) and \( \land \) are associative,
(ii) \( \lor \) and \( \land \) are commutative,
(iii) \( \lor \) and \( \land \) satisfied absorption laws.

| \( \sqcup \) | \( S_r(X_1) \) | \( S_r(X_2) \) | \( S_r(X_3) \) | \( S_r(X_4) \) | \( S_r(X_5) \) | \( S_r(X_6) \) |
| \( S_r(X_1) \) | \( S_r(X_1) \) | \( S_r(X_2) \) | \( S_r(X_3) \) | \( S_r(X_4) \) | \( S_r(X_5) \) | \( S_r(X_6) \) |
| \( S_r(X_2) \) | \( S_r(X_2) \) | \( S_r(X_2) \) | \( S_r(X_3) \) | \( S_r(X_4) \) | \( S_r(X_5) \) | \( S_r(X_6) \) |
| \( S_r(X_3) \) | \( S_r(X_3) \) | \( S_r(X_3) \) | \( S_r(X_3) \) | \( S_r(X_4) \) | \( S_r(X_5) \) | \( S_r(X_6) \) |
| \( S_r(X_4) \) | \( S_r(X_4) \) | \( S_r(X_4) \) | \( S_r(X_4) \) | \( S_r(X_4) \) | \( S_r(X_5) \) | \( S_r(X_6) \) |
| \( S_r(X_5) \) | \( S_r(X_5) \) | \( S_r(U) \) | \( S_r(U) \) | \( S_r(U) \) | \( S_r(U) \) | \( S_r(U) \) |
| \( S_r(X_6) \) | \( S_r(U) \) | \( S_r(U) \) | \( S_r(U) \) | \( S_r(U) \) | \( S_r(U) \) | \( S_r(U) \) |

**Table 1. Soft Rough Union on** \( L \)

**Example 3.1.** Let \( U = \{u_1, u_2, u_3\}, A = \{e_1, e_2, e_3, e_4\} \). Let \( S = (F, A) \) be a soft set over \( U \) given by \( F(e_1) = \{u_1\} \), \( F(e_2) = \{u_3\} \), \( F(e_3) = \phi \), \( F(e_4) = \{u_1, u_3\} \). Let \( X_1 = \phi, X_2 = \{u_1\}, X_3 = \{u_2\}, X_4 = \{u_2, u_3\}, X_5 = \{u_1, u_3\} \). For simplicity, we denote the subset of \( U \), other than \( \phi \) and \( U \) by sequence of letters. For example \( \{u_1, u_3\} \) is written as \( u_1u_3 \). The soft rough sets on the soft approximation
space \( P = (U, S) \) are given by \( S_r(X_1) = (\phi, \phi), S_r(X_2) = (u_1, u_1u_2), S_r(X_3) = (\phi, u_1u_2), S_r(X_4) = (u_3, U), S_r(X_5) = (u_1u_3, U), S_r(U) = (U, U) \). Then the set \( L = \{S_r(X_1), S_r(X_2), S_r(X_3), S_r(X_4), S_r(X_5), S_r(U)\} \) form soft rough lattice with the operations \( \sqcup \) and \( \sqcap \) which are shown in the Tables 1 and 2.

**Table 2. Soft Rough Intersection on \( L \)**

The Hasse diagram of this soft rough lattice appear in Figure 1.

![Figure 1. Soft rough lattice](image)

**Theorem 3.1.** Let \( (L, \lor, \land) \) be a soft rough lattice and \( S_r(X), S_r(Y) \in L \). Then a relation \( \preceq \) defined by \( S_r(X) \preceq S_r(Y) \Leftrightarrow S_r(X) \lor S_r(Y) = S_r(Y) \) or \( S_r(X) \land S_r(Y) = S_r(X) \) is an order relation on \( L \).

**Proof.** Reflexive: \( S_r(X) \preceq S_r(X) \Leftrightarrow S_r(X) \lor S_r(X) = S_r(X) \).

Antisymmetric: Let \( S_r(X) \preceq S_r(Y) \) and \( S_r(Y) \preceq S_r(X) \). Then \( S_r(X) = S_r(X) \land S_r(Y) = S_r(Y) \)

Transitive: Let \( S_r(X) \preceq S_r(Y) \) and \( S_r(Y) \preceq S_r(Z) \). Then \( S_r(X) \wedge S_r(Z) = (S_r(X) \land S_r(Y)) \land S_r(Z) = S_r(X) \land (S_r(Y) \land S_r(Z)) = S_r(X) \land S_r(Y) = S_r(X) \).
Therefore \( S_r(X) \preceq S_r(Z) \).

\[ \Box \]

**Lemma 3.1.** Let \( L \in S_R(U) \). The soft rough inclusion relation \( \sqsubseteq \) is an order relation on \( L \).

**Theorem 3.2.** Let \((L, \lor, \land)\) be a soft rough lattice and \( S_r(X), S_r(Y) \in L \). Then

(i) \( S_r(X) \land S_r(Y) \preceq S_r(X) \) and \( S_r(X) \land S_r(Y) \preceq S_r(Y) \)

(ii) \( S_r(X) \preceq S_r(Y) \lor S_r(X) \) and \( S_r(Y) \preceq S_r(X) \lor S_r(Y) \).

**Proof.** (i) By the definition of order relation \( \preceq \),
\[
(S_r(X) \land S_r(Y)) \lor S_r(X) = S_r(X) \lor (S_r(X) \land S_r(Y)) = S_r(X)
\]
Therefore \( S_r(X) \lor S_r(Y) \preceq S_r(X) \).
Similarly proof of (ii) can be made. \( \Box \)

![Figure 2. Distributive soft rough lattice](image)

**Theorem 3.3.** Let \((L, \lor, \land)\) be a soft rough lattice and \( S_r(W), S_r(X), S_r(Y), S_r(Z) \in L \). Then from \( S_r(W) \preceq S_r(X) \) and \( S_r(Y) \preceq S_r(Z) \) it follows that

(i) \( S_r(W) \land S_r(Y) \preceq S_r(X) \land S_r(Z) \) and

(ii) \( S_r(W) \lor S_r(Y) \preceq S_r(X) \lor S_r(Z) \).

**Proof.** From the Theorem 3.1, we have
\[
S_r(W) \land S_r(X) = S_r(W) \text{ and } S_r(Y) \land S_r(Z) = S_r(Y).
\]
Now
\[
[S_r(W) \land S_r(Y)] \land [S_r(X) \land S_r(Z)] = [S_r(W) \land S_r(X) \land S_r(Y)] \land S_r(Z)
\]
\[
= ([S_r(W) \land S_r(X)) \land S_r(Y)] \land S_r(Z)
\]
\[
= [S_r(W) \land S_r(Y)] \land S_r(Z)
\]
\[
= S_r(W) \land [S_r(Y) \land S_r(Z)]
\]
\[
= S_r(W) \land S_r(Y).
\]
Hence proved.

\[\square\]

Figure 3. Modular soft rough lattice

**Theorem 3.4.** \(S_r(X) \lor S_r(Y)\) and \(S_r(X) \land S_r(Y)\) are the least upper and greatest lower bounds of \(S_r(X)\) and \(S_r(Y)\) respectively.

**Proof.** From the Theorem 3.2 \(S_r(X) \land S_r(Y)\) and \(S_r(X) \lor S_r(Y)\) are lower and upper bounds of \(S_r(X)\) and \(S_r(Y)\) respectively. Now we are to show that these lower and upper bounds are respectively greatest lower bound and least upper bound of \(S_r(X)\) and \(S_r(Y)\). Assume that, \(S_r(X) \land S_r(Y)\) is not greatest lower bound of \(S_r(X)\) and \(S_r(Y)\). Then there exist \(S_r(Z)\) such that \(S_r(X) \land S_r(Y) \preceq S_r(Z) \preceq S_r(X)\) and \(S_r(X) \land S_r(Y) \preceq S_r(Z) \preceq S_r(Y)\). Hence \(S_r(Z) \land S_r(Z) \preceq S_r(X) \land S_r(Y)\) or \(S_r(Z) \preceq S_r(X) \land S_r(Y)\). Therefore \(S_r(Z) = S_r(X) \land S_r(Y)\). Hence a contradiction arises. Therefore \(S_r(X) \land S_r(Y)\) is the greatest lower bound of \(S_r(X)\) and \(S_r(Y)\).

By the similar way we can show that \(S_r(X) \lor S_r(Y)\) is the least upper bound of \(S_r(X)\) and \(S_r(Y)\). \[\square\]

**Definition 3.2.** Let \((L, \lor, \land, \preceq)\) be a soft rough lattice and \(K \subseteq L\). If \(K\) is a soft rough lattice with the operation of \(L\) then \(K\) is called soft rough sublattice of \(L\).

**Example 3.2.** In Example 3.1, let \(K = \{S_r(X_2), S_r(X_3), S_r(X_4), S_r(X_5)\}\). Then \(K\) is a soft rough sublattice of \(L\).

**Theorem 3.5.** Every soft rough lattice is a soft rough sublattice itself.
Theorem 3.6. After that we investigated the several properties and theorems on soft rough lattice. Then the set \( L \) hasse diagram. Finally we have justified our proposed soft rough lattice with supporting examples by set and defined this concept as soft rough lattice based on soft approximation space. named as lattice. As a result, lattice structure has been developed on soft rough established an algebraic connection between soft rough set and algebraic structure.

Now if \( S_r(X) \preceq S_r(Y) \), then \( S_r(X) \land S_r(Y) = S_r(Y) \). Therefore \( S_r(X) \land (S_r(Y) \lor S_r(Z)) = S_r(Y) \lor (S_r(X) \land S_r(Z)) \).

4. Conclusion

Soft rough set is generalization of rough set based on soft set. In this paper, we established an algebraic connection between soft rough set and algebraic structure named as lattice. As a result, lattice structure has been developed on soft rough set and defined this concept as soft rough lattice based on soft approximation space. After that we investigated the several properties and theorems on soft rough lattice. Finally we have justified our proposed soft rough lattice with supporting examples by Hasse diagram.
