

Kompresija i zaštita podataka

DR MARKO D. PETKOVIĆ

dexterofnis@gmail.com

www.pmf.ni.ac.rs/dexter

Sadržaj predmeta i način polaganja ispita

▶ Sadržaj predmeta:

- ▶ Kompresija podataka
- ▶ Prenos i zaštita podataka
- ▶ Bezbednost podataka

▶ Ispit

- ▶ Dva studentska projekta (implementacija određenih algoritama)
- ▶ Završni ispit – odbrana projekata

Kompresija podataka

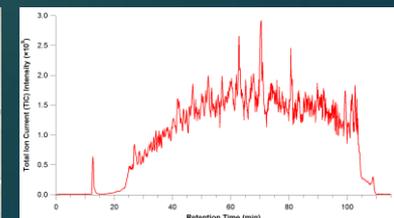

▶ Nekad (pre ~30god):

- ▶ Hard disk: 80 MB
- ▶ Diskete 1.44 MB, 1.2 MB, 360 kB
- ▶ Masovno “zipovanje” fajlova
 - ▶ “Ručni” alati za kompresiju i dekompresiju
 - ▶ Deljenje i prenos podataka na više disketa
- ▶ “Brzi” modemi ...

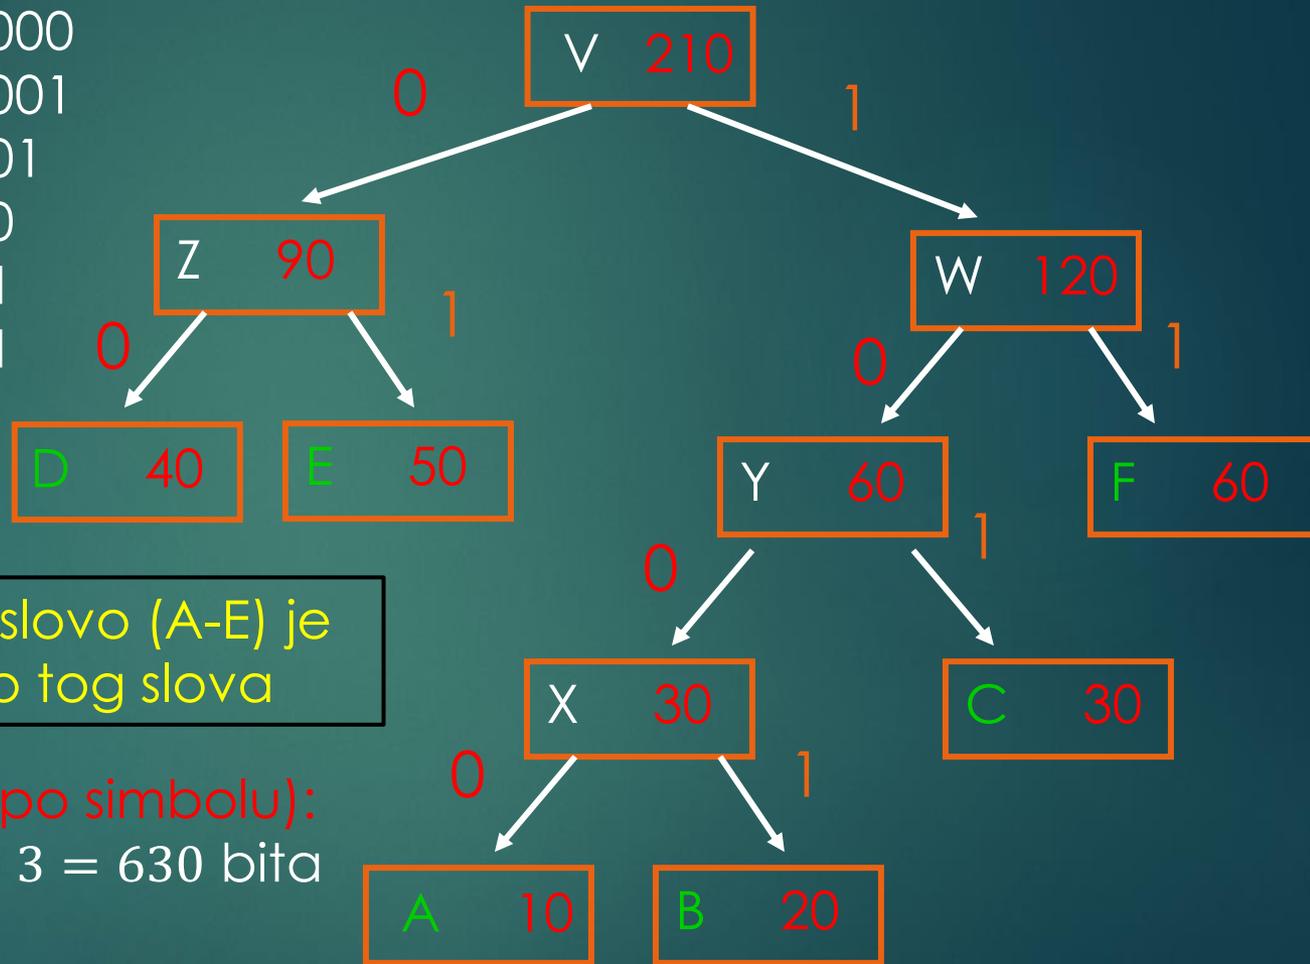

▶ Sad:

- ▶ Hard disk: 4 TB
- ▶ “U pozadini”
 - ▶ DOCX, XLSX, PPTX, ...
 - ▶ GIF, PNG, JPEG, MP3, MPEG
 - ▶ Instalacije programa
- ▶ E – mail
- ▶ Veliki serveri (Google, FB, ...)
- ▶ Cloud servisi...
- ▶ Nestandardne primene
 - ▶ Hromatografija, ...

Hafmanov algoritam

A : $V_A = 1000$
B : $V_B = 1001$
C : $V_C = 101$
D : $V_D = 00$
E : $V_E = 01$
F : $V_F = 11$

Kodna reč za svako slovo (A-E) je put od korena (V) do tog slova

Bez kompresije (3 bita po simbolu):

$$(10 + 20 + \dots + 60) \cdot 3 = 630 \text{ bita}$$

Kompresovani fajl:

$$10 \cdot 4 + 20 \cdot 4 + 30 \cdot 3 + 40 \cdot 2 + 50 \cdot 2 + 60 \cdot 2 = 510 \text{ bita}$$

LZW algoritam (koder + dekoder)

Ulazni niz:

a b c a b a b c

Izlaz: indeks nađene reči u rečniku

Poslato:

1 2 3 5 5

Dekodirano:

a b c a b a b

Rečnik koder:

1	a	6	bc
2	b	7	ca
3	c	8	aba
4	d	9	abc
5	a b		

Rečnik dekoder:

1	a	6	bc
2	b	7	ca
3	c	8	aba
4	d		
5	a b		

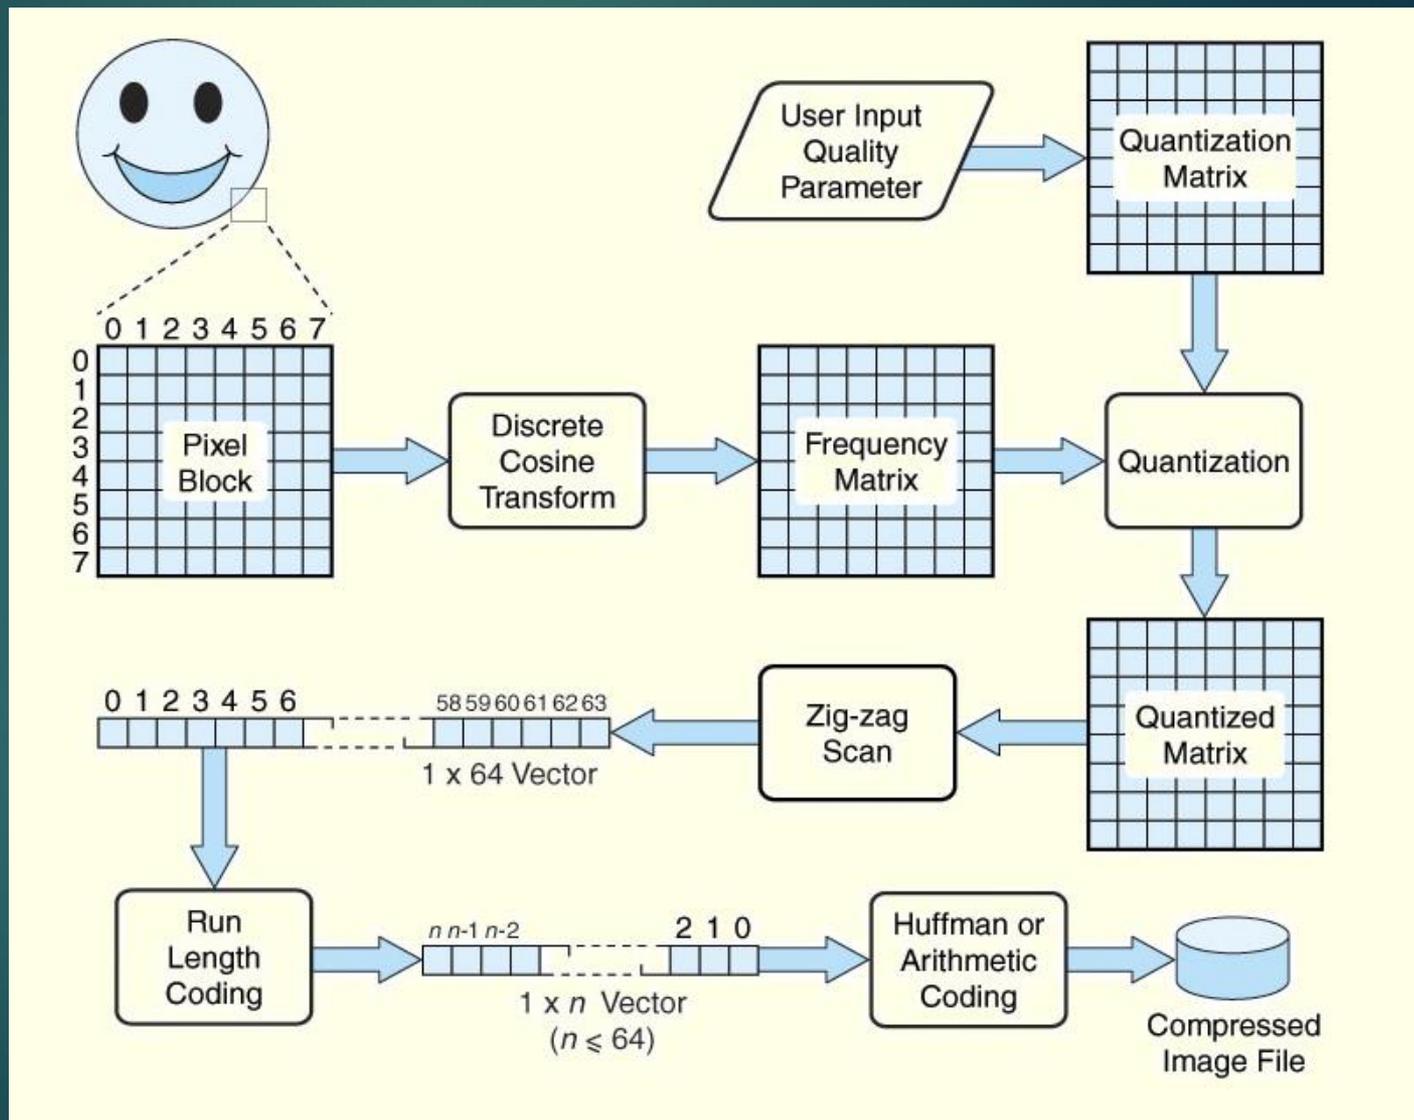

Praktične realizacije

- ▶ ZIP:
 - ▶ Najčešće DEFLATE (LZ77 + Huffman)
 - ▶ Ponekad: bzip2, PPM (arithmetical), itd.
- ▶ GIF slike: LZW
- ▶ PNG: DEFLATE
- ▶ RAR: Neobjavljeno!! Nezvanično (LZSS + PPM, DEFLATE,...)
- ▶ 7-ZIP: kao ZIP, poboljšan!!

Zaštita podataka

Kako detektovati / ispraviti ovakve greške?!?!

Ilustrativni primer

Ne brisite ovu poruku zbog toga sto izgleda cudno. Verovali ili ne, mozete je procitati.

Nsiam vrevoao da zpavrao mgou rzmaueti ono sto ctaim. Zaavljhuujci nobniecoj mcoi ljdksuog mgzoa, pemra irtazsiavnjima nucainka sa Kmbreidza, njie vzano kjoim su roedsldoem npiasnaa slvoa u rcei, jdieno je btino da se pvro i psldeonje sovlo nlaaze na sovm msteu.

Otasla solva mgou btii u ptponuom nerdeu i bez ozibra na ovu oloknost, tkest mzeote ctiami bez pobrelma. Ovo je zbog tgoa sto ljdkusi mzoak ne ctia savko slvoa pnaoosb, vec rcei psmraota kao cleniu. Oavj preomecaj je sljiavo nzavan tipoglikemija :-)

Zacudjujuce, zar ne? A uevk ste msilili da je pavrpois vzaan.

“Korisna” redundansa?!?!

- ▶ Redundansa pomaže da se detektuju i/ili isprave greške (oštećenje medijuma, greške pri prenosu, itd.)
- ▶ Svesno dodavanje “viška” informacija
- ▶ Cilj: Ispraviti što više grešaka sa minimalnom količinom unešene redundanse

Hvala na pažnji!!!!

Programmer

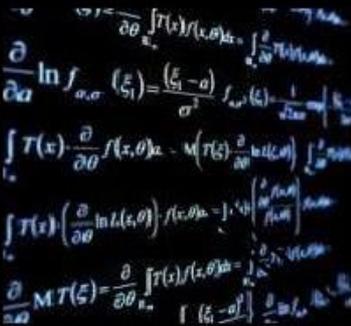

what my parents think
I do

what my friends think
I do

what society thinks I
do

what our professors
envisioned we could
do...

what I think I do

```
1 public class Demo {
2     private static final String CONSTANT = "string";
3     private Object obj;
4
5     //
6     * Create a new Demo.
7     * obj = the object to demonstrate.
8     *
9     public Demo(Object obj) {
10        this.obj = obj;
11        String s = CONSTANT;
12        int i = 1;
13    }
14
15    public static void main(String[] args) {
16        Demo demo = new Demo();
17    }
18 }
```

what I really do
